

Pelican 4.0.1

Pelican is a static site generator, written in [Python](#). Highlights include:

- Write your content directly with your editor of choice in [reStructuredText](#) or [Markdown](#) formats
- Includes a simple CLI tool to (re)generate your site
- Easy to interface with distributed version control systems and web hooks
- Completely static output is easy to host anywhere

Ready to get started? Check out the [Quickstart](#) guide.

Features

Pelican 4 currently supports:

- Articles (e.g., blog posts) and pages (e.g., “About”, “Projects”, “Contact”)
- Comments, via an external service (Disqus). If you prefer to have more control over your comment data, self-hosted comments are another option. Check out the [Pelican Plugins](#) repository for more details.
- Theming support (themes are created using [Jinja2](#) templates)
- Publication of articles in multiple languages
- Atom/RSS feeds
- Code syntax highlighting
- Import from WordPress, Dotclear, or RSS feeds
- Integration with external tools: Twitter, Google Analytics, etc. (optional)
- Fast rebuild times thanks to content caching and selective output writing

Why the name “Pelican”?

“Pelican” is an anagram for *calepin*, which means “notebook” in French. ;)
